

# CeBIT Digital Summit: Blockchain

Conference Hall 8, Bamboo Stage

Tuesday, March 21 2017, 10:00 a.m. – 18:00 p.m.

It is a paradigm shift that some people from the scene compare with the emergence of the World Wide Web: Blockchain. Global interconnection, steady availability and the seamless integration of systems and devices require transactions that are even faster, more secure and more transparent than ever before. By now, Blockchain is the only guarantee-carrying technology. As technology of the future, Blockchain provides a variety of application possibilities that revolutionize current forms of data storage and handling already, but will especially continue to do so.

Act, apply and create. This conference brings together the experts of this area and presents new business models that are based on Blockchain – including first implementations of the industry on behalf of case studies.
