

A bridge to **Quantum Computing** and why we need one

Dr. Joseph Reger, Fujitsu Fellow
CTO Fujitsu CE & EMEA

2019-04-03, German-Japanese Economic Forum, Hannover

Why Quantum Computing

Why does Quantum Computing work?

Quantum Computing uses quantum-mechanical phenomena

Quantum Superposition

In the quantum space you can be in all possible states at the same time. You can be both '0' and '1' at the same time.

n qubits $\sim 2^n$ bits (classic)

"0" or "1"
DIGITAL STATE

"0" and "1"
QUANTUM STATE

Quantum Tunneling

A process in which a particle passes through a barrier that it classically cannot surmount.

Quantum Entanglement

Is a state in which 2 particles are connected and tied together irrespective of the distance between them.

Types of Quantum Computing

Quantum Computing Technology

Quantum Annealing

- Using quantum physics to identify minimum energy points thru math. algorithms
- Targeted to solve Combinatorial Optimization Problems

Quantum Gate System

- Perform calculations by manipulating quantum evolution via application of gates
- Targeted to solve problems incl. cryptography and search

Challenges

Stability

Complex infrastructure and cost

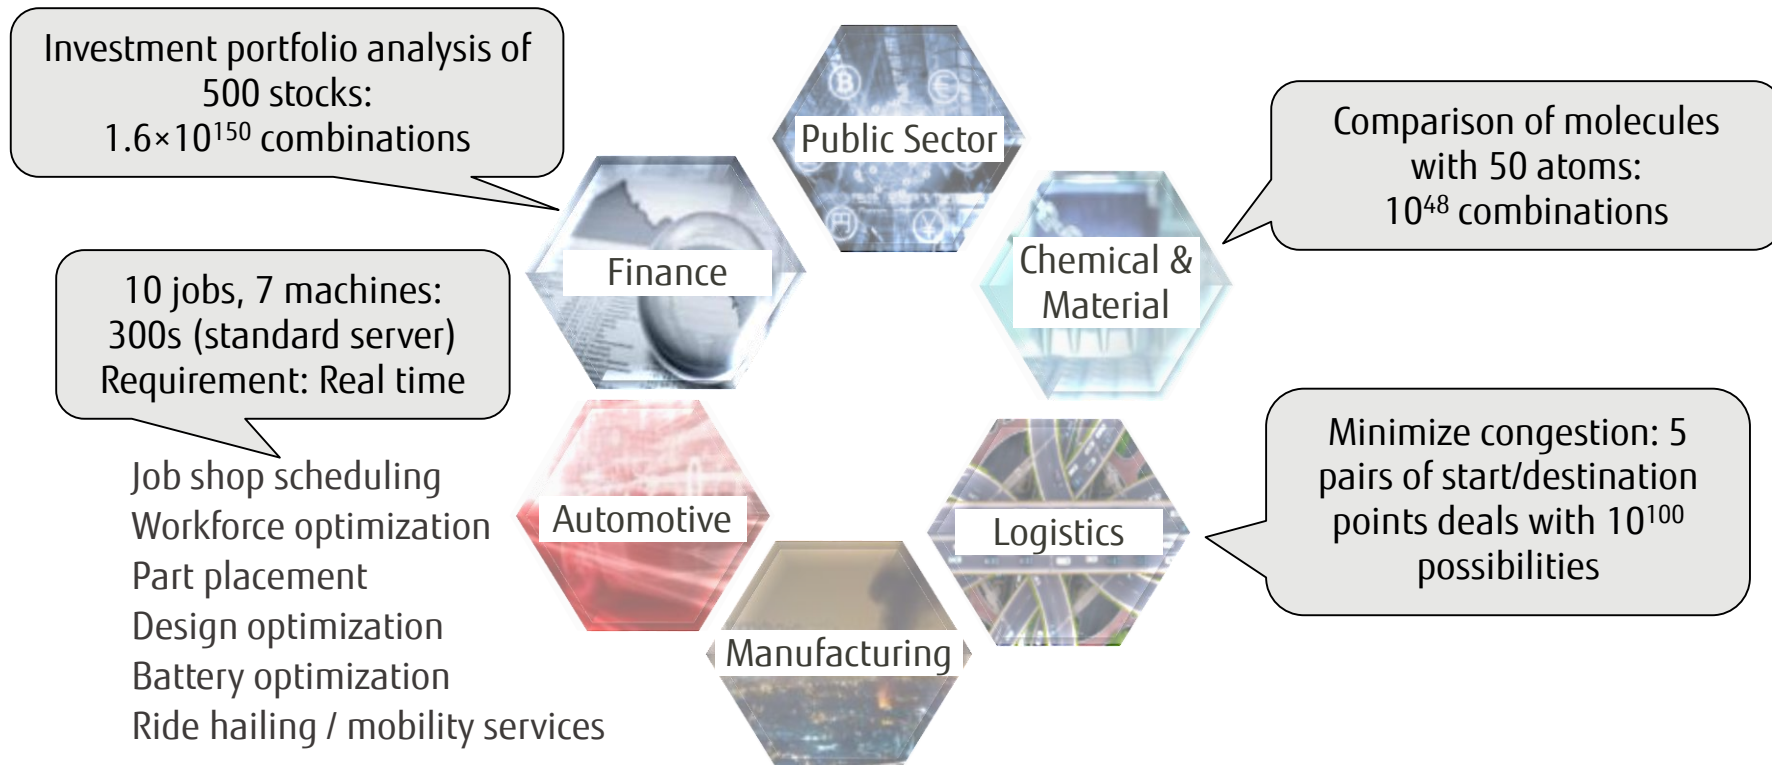

Accuracy

Readiness

Combinatorial Optimization

Real World Example: Robot Positioning Optimization

Which roundtrip / welding direction to choose ?

- Robots "visit" seam location & seam can be drawn in 2 directions

$2^{n-1}(n-1)!$ possibilities (n = number of seams)

n	2	7	10	22	64
$2^{n-1}(n-1)!$	2	46,080	1.86×10^8	1.07×10^{26}	$1,83 \times 10^{106}$

A Bridge to Quantum Computing

Built on digital circuit based architecture, inspired by quantum computing

Inspired by Superposition

Parallel Speed up

Scale of 8,192 bits, parallel processing

Inspired by Quantum Tunneling

Annealing Process

Increased probability to escape local minima

Inspired by Entanglement

Easy Problem Mapping

Full connectivity through the 8,192 bit scale with 64-bit precision

Robot Positioning
Optimization

n	2	7	10	22	64
$2^{n-1}(n-1)!$	2	46080	1.86×10^8	1.07×10^{26}	$1,83 \times 10^{106}$

A Bridge to Quantum Computing

New digital circuit architecture inspired by quantum phenomena

Digital Annealer

General-purpose
computer

Quantum
computer

Brain-Like
computer

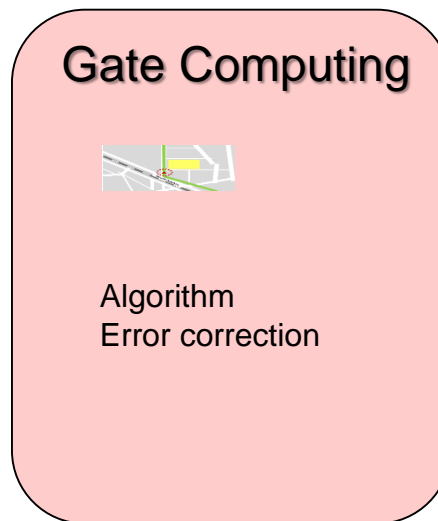

- Solves combinatorial optimization problems up to 10.000 times faster than conventional computers
- More practical than quantum computer

Engagements

- Process improvement: Can I solve my problem faster / more often / accurately... ?
- Disruption: How will my business change through continuous / real time optimization ?

Mathematical
mapping

Algorithm
development

A Bridge to Quantum Computing

Hype Cycle Emerging Technologies, 2018

shaping tomorrow with you
