Secretary general

Deputy secretary general

1. Before 1949, pre-industrial stage.
2. From 1949 to 1978, structural layout stage under the planned economy.
3. From 1978 to 2000, transformation and growth stage under the environment of reform and opening-up. **CMCA was founded in 1989,**
4. From 2001 to 2010, rapid expansion stage driven by the market.  
**A period of rapid development** , during this decade, the GDP of the whole industry increased from RMB 45.6 billion in 2001 to RMB 249.2 billion, an increase of 5 times, an average annual growth rate of over 20%.
5. From 2011 to now, The industry has entered a period of development at medium and low speed. **Industrial adjustment, transformation and upgrading stage.**

## **1. Status and current situation of China's general machine components industry**

- The Association now has more than 2,000 group members and more than 300,000 practitioners, with the output value of more than RMB 389.5 billion and the total export value of about USD16 billion.
- Approximately 1% of which was contributed by the China machinery industry.

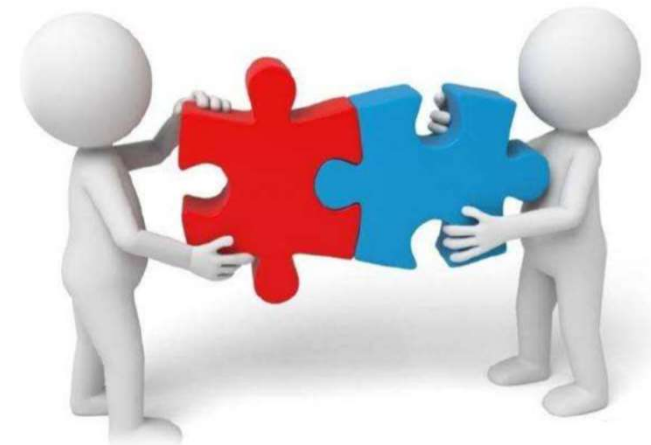

## 2. Development trend

In recent years, The growth rate is slowing down, We need to find new drivers of growth and make new progress.

The application of new technologies and new materials will promote the development of new products and improve supporting capabilities.

Intelligent products, Intelligent manufacturing, and Green manufacturing would ensure sustainable development.
